Rakshit Gupta	2021A1R050

Brief Project Description:

AgeWell is a web-based platform built to support senior citizens in managing health, social interaction, and personal finances. It features an elder-friendly design, offers digital learning support, and ensures safety through real-time emergency response tools. Additionally, family members or caregivers can stay updated on the well-being of their elderly loved ones, making it a comprehensive support system.

Objective:

- To create a digital environment that empowers elderly individuals to manage their daily lives independently
- To support social interaction, financial planning, and medical reminders
- To assist families and caregivers in monitoring and responding to elder needs in real time
- To improve digital literacy among the elderly through guided resources
- To foster safety and wellness through connected services

Problem Statement:

Elderly citizens often struggle with digital tools, leading to challenges in accessing essential services like banking, health management, or communication. There is also a gap in timely family support during emergencies. A need exists for a single, secure platform that helps elders manage key aspects of life and allows family involvement without overwhelming the users.

This project addresses pressing issues from:

- **Smart India Hackathon (SIH):** Elder safety, tech enablement, and support infrastructure
- **Google Developer Community:** Solving for digital inclusion and access

Key Features:

1. Social Events & Community Interaction

- Host and attend social or community events
- RSVP system and calendar with reminders
- Browse nearby or interest-based events

2. Learning Corner (Tech Literacy Hub)

- Easy tutorials on digital tools like UPI, WhatsApp, appointment booking
- Video + text format for clarity
- Progress tracking for completed topics

3. Personal Finance Manager

- Track income and categorized expenses
- View spending insights via interactive charts
- Set and manage monthly budgets
- Get alerts for upcoming bills and dues

4. Emergency SOS Button

- Always-visible emergency button
- Automatically opens dialer to 112
- Sends location and alerts to emergency contacts (via SMS/email)
- Live GPS map link

5. Child/Family Account Integration

- Children can link to and monitor elder accounts
- View reminders, tutorial progress, SOS triggers
- Get alerts for missed medication or repeated warning signals

- Optional dashboard for caregiver monitoring

6. Health & Wellness Tips

- Daily age-based and gender-specific wellness advice
- Medicine reminder system with checkboxes
- Motivational and health-awareness content

7. User Profiles & Secure Login

- Store personal, health, and emergency information
- Secure login using Flask-Login and bcrypt
- Supports linking multiple children/family accounts to one elder

8. Reminders & Notifications (optional)

- Custom reminders (medicine, payments, appointments)
- Alerts via website, SMS, and email
- Managed by backend schedulers (APScheduler or Celery)

Technology Tools & Frameworks Used:

Component	Tools & Frameworks
Frontend	HTML5, CSS3, Bootstrap, JavaScript, Jinja2
Backend	Flask (Python)
Database	MongoDB
Charts/Calendar	Chart.js, FullCalendar.js
Authentication	Flask-Login, bcrypt, role-based access
Geolocation	Google Maps API / Leaflet
Notifications	Flask-Mail (email), Twilio (SMS)

UN Sustainable Development Goals (SDGs) Aligned:

SDG Goal	Description
Goal 3	<i>Good Health and Well-being:</i> Supports elderly wellness, health tracking, emergency response
Goal 4	<i>Quality Education:</i> Promotes digital literacy through tutorials for elderly users
Goal 10	<i>Reduced Inequalities:</i> Bridges the digital gap for older adults
Goal 11	<i>Sustainable Cities and Communities:</i> Fosters inclusion and safety for all age groups
Goal 16	<i>Peace, Justice and Strong Institutions:</i> Ensures user safety, data security, and emergency preparedness
