Abstract

AgeWell – A Smart Portal for Senior Citizen Support is an innovative web platform designed to assist elderly users in managing their daily routines independently while fostering stronger family connections. The system provides a user-friendly interface with essential features like medicine reminders, financial tracking, personal task scheduling, and social event participation. Additionally, the Learning Corner offers digital literacy resources, including step-by-step guides and a tips section for health and technology awareness. A dedicated child panel enables family members to monitor the well-being of their elderly relatives, while the admin dashboard manages content, user feedback, and tutorials. AgeWell bridges the digital divide by simplifying technology for elderly users, empowering them with tools to manage their health, finances, and social lives while promoting confidence and digital inclusion. The project integrates technology with care, fostering independence, and enhancing the quality of life for elderly users and their families.

Innovation & Impact

INNOVATION:

- Combines health, finance, learning, and reminders in one easy-to-use platform. Provides daily health and tech tips tailored for elderly users.

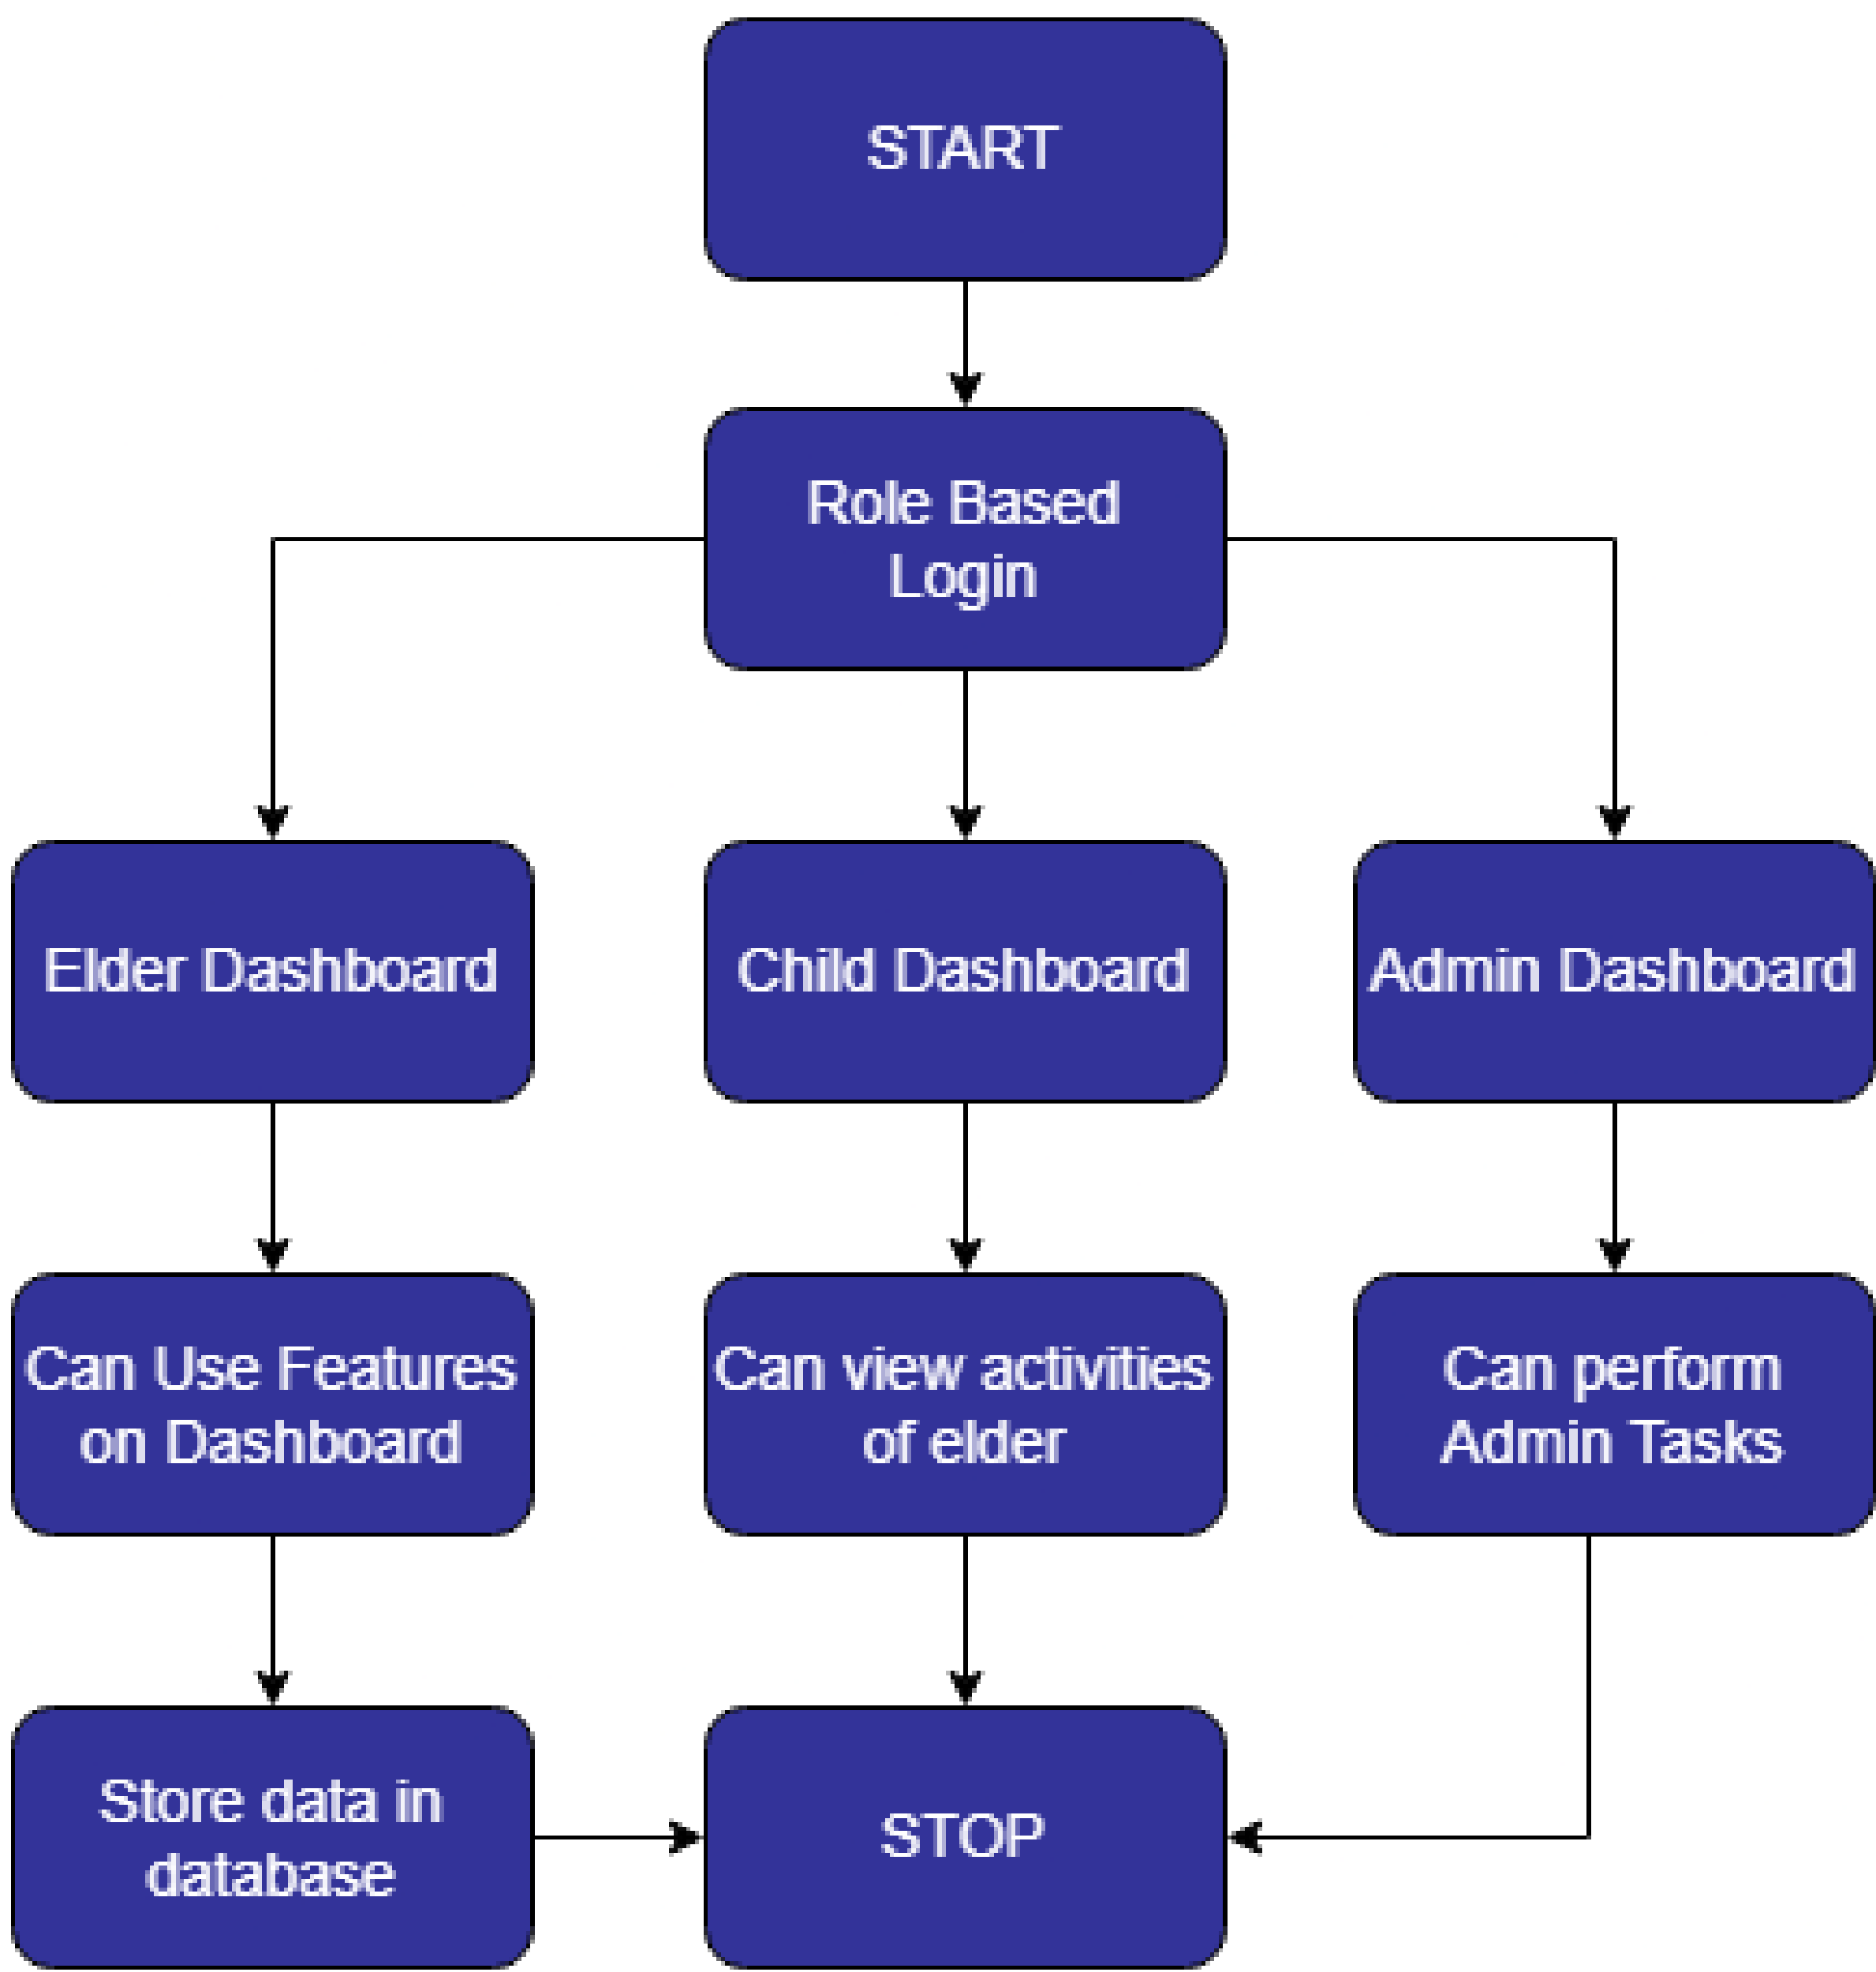

IMPACT:

- Empowers elderly users with digital tools for independent living.
- Enhances family support through child panels and connected features.

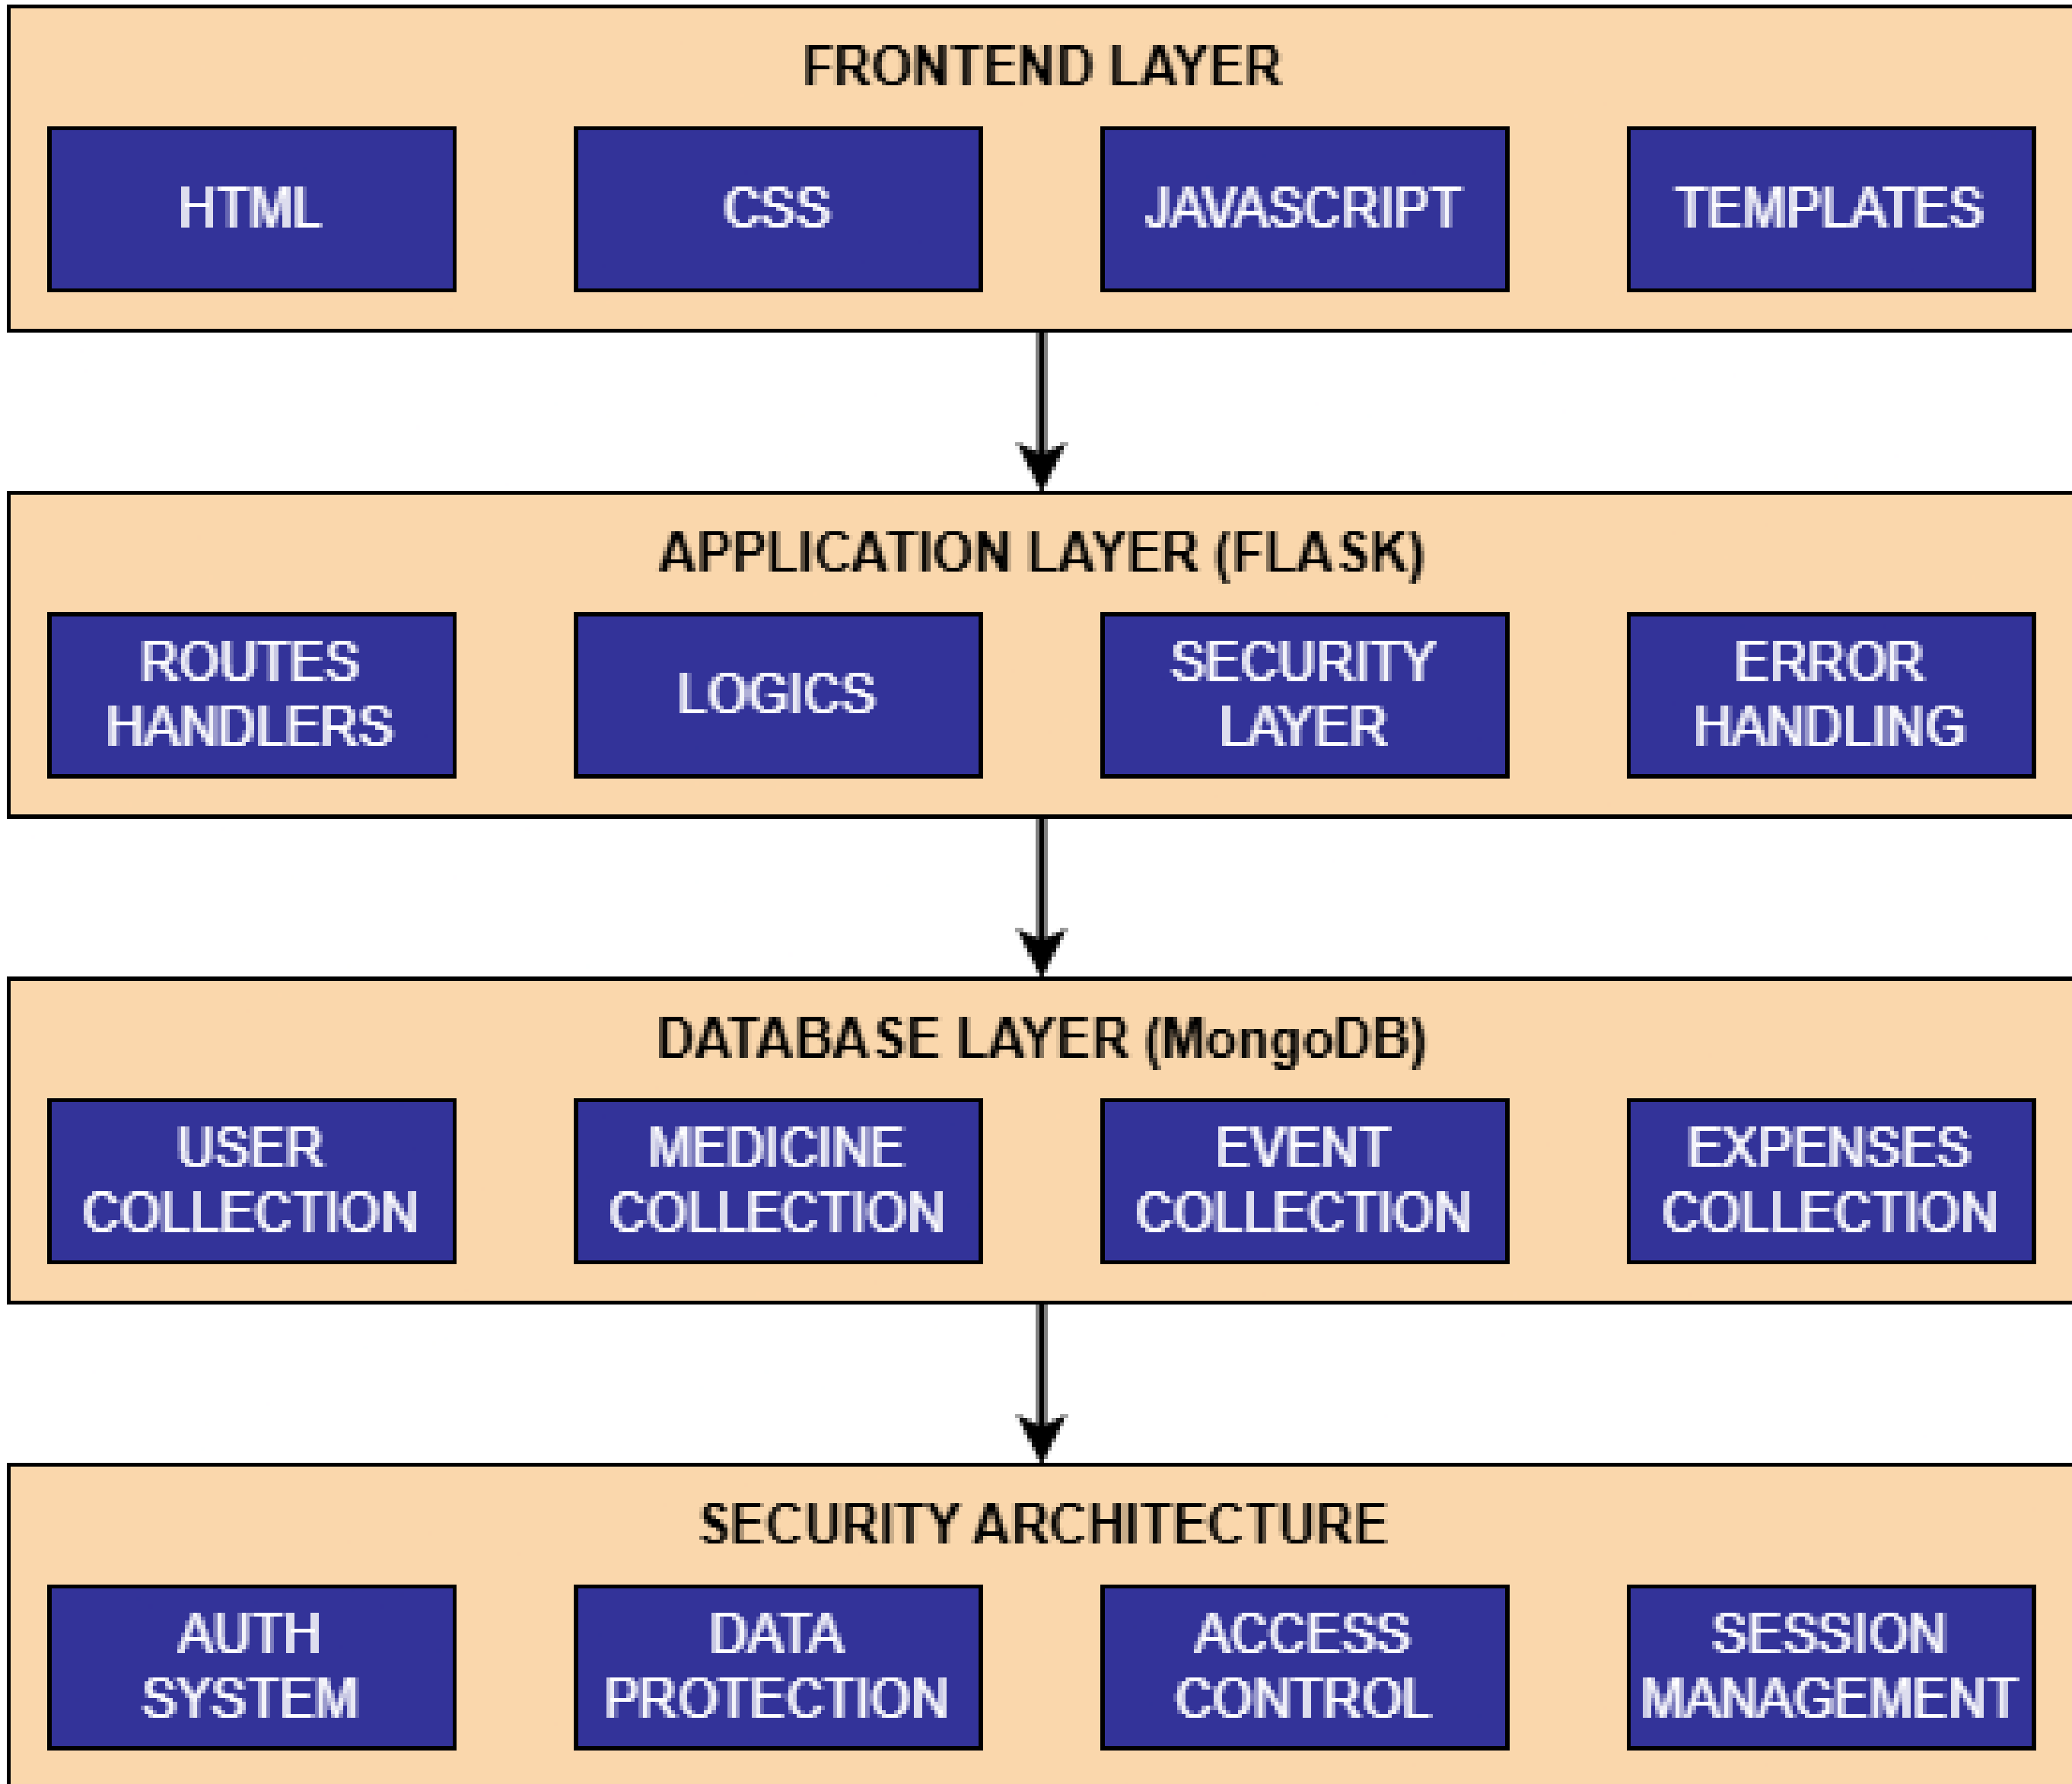

Methodology

User-Centric Design	Core Features	Technical Implementation
- Multi-role system (Elder, Child, Admin) - Intuitive interface for elderly users - Family integration system	- Medicine Management & Reminders - Financial Tracking & Budgeting - Social Events & Community Engagement - Emergency Support System	- Python Flask Backend - MongoDB Database - Secure Authentication - Real-time Updates
